Things Sep 03
2022 Over the past years, a considerable amount of effort has been devoted, both in industry and academia, towards the development of basic technology as well as innovative applications for the Internet of Things. Adaptive Middleware for the Internet of Things introduces a scalable, interoperable and privacy-preserving approach to realize IoT applications and discusses abstractions and mechanisms at the middleware level that simplify the realization of services that can adapt autonomously to the behavior of their users. Technical topics discussed in the

book include: Behavior-driven Autonomous Services GAMBAS Middleware Architecture Generic and Efficient Data Acquisition Interoperable and Scalable Data Processing Automated Privacy Preservation Adaptive Middleware for the Internet of Things summarizes the results of the GAMBAS research project funded by the European Commission under Framework Programme 7. It provides an in-depth description of the middleware system developed by the project consortium. In addition, the book describes several innovative mobility and monitoring applications that

have been built, deployed and operated to evaluate the middleware under realistic conditions with a large number of users. Adaptive Middleware for the Internet of Things is ideal for personnel in the computer and communication industries as well as academic staff and research students in computer science interested in the development of systems and applications for the Internet of Things.

Pacific Ethnomathematics Mar 17 2021 This ground-breaking bibliography by distinguished Pacific researcher Nicholas Goetzfridt examines

mathematical concepts and practices in Polynesia, Melanesia, and Micronesia. It covers number systems, counting, measuring, classifying, spatial relationships, symmetry, geometry, and other aspects of ethnomathematics in relation to a wide range of activities such as trade, education, navigation, construction, rituals and festivals, divination, weaving, tattooing, and music. In compiling nearly five hundred citations, Goetzfridt makes use of the vast resources of writing about the Pacific from the 1700s to the present. In addition to discussing

Pacific knowledge systems in general, his introductory chapter includes a helpful overview of the relatively new field of ethnomathematics and important theoretical reflections on the discipline as a research program. Extensive subject and geographic indexes provide numerous ways to experience the rich heritage and history of Pacific ethnomathematical concepts covered in this book, including: the 256 possible knotted fates enabled by the Carolinian sky god Supwunumen, etak segmentation concepts in stellar based voyaging, the highly diverse counting systems of Papua New Guinea,

the alignment of stone structures with stars to mark the appearance of the equinox and solstice, and contemporary educational issues in the standardized teaching of Western mathematics.

Pacific Nations and Territories

Dec 26 2021 Offers information on all the island groups of Micronesia, Melanesia, and Polynesia, covering geography, geology, migration, history, climate, and pre-contact lifestyles.

Using the Meade

ETX Aug 22 2021 The Meade ETX range of telescopes is one of the most successful ever made. It is low-cost, has sold in its tens of thousands, and is available in almost

every country. Here, ETX expert Mike Weasner reveals everything any amateur astronomer ever wanted to know about the telescope. First book dedicated entirely to the ETX. Written by an acknowledged world authority. Describes the "best" 100 objects to begin observing. Contains detailed hints and tips aimed at getting the best out of the ETX. Features imaging (photographic and digital) as well as visual observing.

[Build Information System Pyramid](#)
May 07 2020 This is an introductory guide to the techniques of Data

warehousing and business intelligence. Centered on modeling, this devotional book explores the topic of fundamental of Data warehouse architectures. Using the anatomy analogy, Taiwei is able to clearly explain multi-layered structure of data warehouse modeling, star/snowflake schema, dynamic ETL, cube design, and recommended approaches. It is suitable for database engineers and developers, college students as well as IT managers and professional data architects.

Mental Models
Aug 10 2020 This classic volume compiles and describes

interdisciplinary research on the formal nature of human knowledge about the world. Three key dimensions that characterize mental models research are examined: the nature of the domain studied, the nature of the theoretical approach, and the nature of the methodology.

where we have been, how far we have come and where we are going.
All Source Positioning, Navigation and Timing Jul 21 2021
This is the first book on the topic of all source positioning, navigation and timing (PNT) and how to solve the problem of PNT when the most widely-used measurement source available today, the GPS system, may be come unavailable, jammed or spoofed. Readers learn how to define the system architecture as well as the algorithms for GPS-denied and GPS-challenged PNT systems. In addition, the book provides

comprehensive coverage of the individual technologies used, such as celestial navigation, vision-based navigation, terrain referenced navigation, gravity anomaly referenced navigation, signal of opportunity (SOO) based PNT, and collaborative PNT. Celestial Navigation is discussed, with stars and satellite used as reference, and star-tracker technology also included. Propagation based timing solutions are explored and the basic principles of oscillators and clocks presented. Initial alignment of strap-down navigation systems is explored, including initial alignment as a Kalman filter

problem. Velocimeter/Dead reckoning based navigation and its impact on visual odometry is also explained. Covering both theoretical and practical issues, and packed with equations and models, this book is useful for both the engineering student as well as the advanced practitioner.

or a trill of birdsong could point the way home-and, for the alert traveler, they still can. Whether you go exploring in the mountains or on a lunch break, natural navigation will keep you on course and open your eyes to the small wonders of the natural world. Almost anything in our environment can help us find our way-if we know what to look for. Adventurer and navigation expert Tristan Gooley unlocks the directional clues hidden in: the sun, moon, and stars clouds weather patterns lengthening shadows changing tides plant growth and the habits of local wildlife Enriched by helpful

illustrations, and filled with navigational anecdotes collected across centuries, continents, and cultures, The Natural Navigator proves that anyone with a curious mind can still find south by looking at the moon-and find adventure in their own backyard.

[Cognition in the Wild](#) Jul 09 2020

Edwin Hutchins combines his background as an anthropologist and an open ocean racing sailor and navigator in this account of how anthropological methods can be combined with cognitive theory to produce a new reading of cognitive science. His theoretical insights are grounded in an extended analysis of ship navigation—its computational basis, its historical roots, its social organization, and the details of its implementation in

actual practice aboard large ships. The result is an unusual interdisciplinary approach to cognition in culturally constituted activities outside the laboratory—"in the wild." Hutchins examines a set of phenomena that have fallen in the cracks between the established disciplines of psychology and anthropology, bringing to light a new set of relationships between culture and cognition. The standard view is that culture affects the cognition of individuals. Hutchins argues instead that cultural activity systems have cognitive properties

of their own that are different from the cognitive properties of the individuals who participate in them. Each action for bringing a large naval vessel into port, for example, is informed by culture: the navigation team can be seen as a cognitive and computational system. Introducing Navy life and work on the bridge, Hutchins makes a clear distinction between the cognitive properties of an individual and the cognitive properties of a system. In striking contrast to the usual laboratory tasks of research in cognitive science, he applies the principal metaphor of cognitive

science—cognition as computation (adopting David Marr's paradigm)—to the navigation task. After comparing modern Western navigation with the method practiced in Micronesia, Hutchins explores the computational and cognitive properties of systems that are larger than an individual. He then turns to an analysis of learning or change in the organization of cognitive systems at several scales. Hutchins's conclusion illustrates the costs of ignoring the cultural nature of cognition, pointing to the ways in which contemporary cognitive science

can be transformed
by new meanings
and interpretations.
