The Educational Leader's Guide to Improvement Science May 16 2021 The Educational Leader's Guide to Improvement Science: Data, Design and Cases for Reflection is a collection illustrating applied organizational problem-solving using methods of improvement science in educational leadership. Early chapters introduce improvement science and then the reader is led through a logical sequence of inquiry, presented with cases of educational dilemma matched with principles of improvement science and provided examples of research methodology applied in context. Because improvement science research is so quickly becoming a signature pedagogy and core subject area of inquiry in the field of educational leadership, the literature is still scant in its coverage of improvement science models; it is the purpose of this publication to fill the void by providing concrete examples, through case studies, of instances where improvement research methods and analyses can be embedded to enhance and strengthen efforts at organizational improvement. This text concentrates on the elements faculty, students, and administrators need; specific models where improvement science frameworks enhance the reliability and validity of improvement or quality enhancement efforts. Perfect for courses such as: Introduction to Improvement Science, Seminar/Practicum in Educational Leadership, Introduction to Program Evaluation, Educational Research for Administrators, Action Research for School Practitioners, Educational Research, School Improvement, and Teacher Leadership.

Learning to Improve Aug 31 2022 As a field, education has largely failed to learn from experience. Time after time, promising education reforms fall short of their goals and are abandoned as other promising ideas take their place. In Learning to Improve, the authors argue for a new approach. Rather than "implementing fast and learning slow," they believe educators should adopt a more rigorous approach to improvement that allows the field to "learn fast to implement well." Using ideas borrowed from improvement science, the authors show how a process of disciplined inquiry can be combined with the use of networks to identify, adapt, and successfully scale up promising interventions in education. Organized around six core principles, the book shows how "networked improvement communities" can bring together researchers and practitioners to accelerate learning in key areas of education. Examples include efforts to address the high rates of failure among students in community college remedial math courses and strategies for improving feedback to novice teachers. Learning to Improve offers a new paradigm for research and development in education that promises to be a powerful driver of improvement for the nation's schools and colleges.

Improvement Nov 02 2022 The national bestseller and New York Times Notable Book about a young single mother living in New York, her eccentric aunt, and the decisions they make that have unexpected implications for the world around them from one of America's most gifted writers of fiction, "our own country's Alice Munro" (The Washington Post). Reyna knows her relationship with Boyd isn't perfect, yet as she visits him throughout his three-month stint at Rikers Island, their bond grows tighter. Kiki, now settled in the East Village after a journey that took her to Turkey and around the world, admires her niece's spirit but worries that she always picks the wrong man. Little does she know that the otherwise honorable Boyd is pulling Reyna into a cigarette smuggling scheme, across state lines, where he could risk violating probation. When Reyna ultimately decides to remove herself for the sake of her four-year-old child, her small act of resistance sets into motion a tapestry of events that affect the lives of loved ones and strangers around them. A novel that examines conviction, connection, and the possibility of generosity in the face of loss, Improvement is as intricately woven together as Kiki's beloved Turkish rugs, as colorful as the tattoos decorating Reyna's body, with narrative twists and turns as surprising and unexpected as the lives all around us. The Boston Globe says of Joan Silber: "No other writer can make a few small decisions ripple across the globe, and across time, with more subtlety and power." Improvement is Silber's most shining achievement yet. "Without fuss or flourishes, Joan Silber weaves a remarkably patterned tapestry connecting strangers from around the world to a central tragic car accident. The writing here is funny and down-to-earth, the characters are recognizably fallible, and the message is quietly profound: We are not ever really alone, however lonely we feel." —The Wall Street Journal

Leadership Commitments to Improve Value in Health Care Sep 07 2020 This volume reports on discussions among multiple stakeholders about ways they might help transform health care in the United States. The U.S. healthcare system consists of a complex network of decentralized and loosely associated organizations, services, relationships, and participants. Each of the healthcare system's component sectors—patients, healthcare professionals, healthcare delivery organizations, healthcare product developers, clinical investigators and evaluators, regulators, insurers, employers and employees, and individuals involved in information technology—conducts activities that support a common goal: to improve patient health and wellbeing. Implicit in this goal is the commitment of each stakeholder group to contribute to the evidence base for health care, that is, to assist with the development and application of information about the efficacy, safety, effectiveness, value, and appropriateness of the health care delivered.
