Multilevel Modelling for Public Health and Health Services Research Oct 20 2021 This open access book is a practical introduction to multilevel modelling or multilevel analysis (MLA) - a statistical technique being increasingly used in public health and health services research. The authors begin with a compelling argument for the importance of researchers in these fields having an understanding of MLA to be able to judge not only the growing body of research that uses it, but also to recognise the limitations of research that did not use it. The volume also guides the analysis of real-life data sets by introducing and discussing the use of the multilevel modelling software MLwiN, the statistical package that is used with the example data sets. Importantly, the book also makes the training material accessible for download - not only the datasets analysed within the book, but also a freeware version of MLwiN to allow readers to work with these datasets. The book's practical review of MLA comprises: Theoretical, conceptual, and methodological background Statistical background The modelling process and presentation of research Tutorials with example datasets Multilevel Modelling for Public Health and Health Services Research: Health in Context is a practical and timely resource for public health and health services researchers, statisticians interested in the relationships between contexts and behaviour, graduate students across these disciplines, and anyone interested in utilising multilevel modelling or multilevel analysis. "Leyland and Groenewegen's wealth of teaching experience makes this book and its accompanying tutorials especially useful for a practical introduction to multilevel analysis." ? Juan Merlo, Professor of Social Epidemiology, Lund University "Comprehensive and insightful. A must for anyone interested in the applications of multilevel modelling to population health". ? S. (Subu) V. Subramanian, Professor of Population Health and Geography, Harvard University.

The Oxford Handbook of Personnel Assessment and Selection Nov 28 2019 Employee selection remains an integral role of industrial/organizational psychology. Modern demands on organizations have required adaptations on the part of those responsible for selection programs, and researchers in evaluating the impact of these adaptations as well as their implications for how we view human potential. Many of these developments (web-based assessments, social networking, globalization of organizations, for example) determine in great part the content and focus of many of the chapters in this book. The Oxford Handbook of Personnel Assessment and Selection is organized into seven parts: (1) historical and social context of the field of assessment and selection; (2) research strategies; (3) individual difference constructs that underlie effective performance; (4) measures of predictor constructs; (5) employee performance and outcome assessment; (6) societal and organizational constraints on selection practice; and (7) implementation and sustainability of selection systems. While providing a comprehensive review of current research and practice, the purpose of the volume is to provide an up-to-date profile of each of the areas addressed and highlight current questions that deserve additional attention from researchers and practitioners. This compendium is essential reading for industrial/organizational psychologists and human resource managers.

Lifespan Development in Context Nov 08 2020 Award-winning author Tara L. Kuther presents Lifespan Development in Context, a topically organized version of her bestselling Lifespan Development text that provides a panoramic view of the many influences that shape human development. Kuther's student-friendly narrative guides the reader through immersive video cases and real-world examples to illustrate how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change throughout our lives. Three core themes resonate throughout each chapter: the centrality of context, the importance of research, and the value of applied developmental science. Foundational theories and classic studies are combined with contemporary research and culturally diverse perspectives for a modern introduction to the field that is both comprehensive and concise. Visual overviews, case studies, and critical thinking questions encourage self-reflection and class discussion, ensuring students have the tools they need to apply course concepts to their lives and future careers.

The Psychology of Later Life Oct 08 2020 This book examines current knowledge of adult development and aging using a unique three-part framework that considers lifespan development, social and physical environment, and historical-cultural factors.

Context and Development Aug 06 2020 The purpose of this book is to explore meaningful integrations of developmental processes and functioning with conceptualizations of "context" -- a term traditionally denoting physical settings, social arenas, or perceptual or social backdrops in relation to a focal point. However, the study of context has taken a considerably more unique and vibrant form in recent years -- the term is becoming more than a substitute for background independent variables. Rather, the contributions of context to behavior, thought, feelings -- and vice versa -- are becoming central issues in many research domains. This text is a collection of empirical and theoretical accounts for understanding context; its focus is on integrating the study of context with the science of developmental psychology. Although the authors work in many different areas of the field, and with different populations, they all converge on a central methodological/conceptual theme of contextualism, which is presented as the dynamic integration of intraindividual factors with environmental and social/environmental factors.

Contextual Social Psychology Jan 29 2020 This compelling book offers insight into the advantages of contextual social psychology, applying these analyses to critical topics such as prejudice, far-right voting patterns, relative deprivation, and intergroup contact.

Temperament in Context Mar 13 2021 Although the importance of context has been emphasized by temperament researchers, until now there has been remarkably little systematic research on the unique role specific aspects of context play in the development and impact of temperament. The goal of this volume is to systematize current knowledge and theory on the role played by specific aspects of context in the etiology, expression, and influence of temperament, particularly for those aspects of temperament that are most likely to relate to later personality traits. Reflecting the editors' view that the interface between temperament and context is a bidirectional phenomenon, this volume focuses on two broad issues: 1) How does context moderate the expression, continuity, or consequences of individual differences in introversion-extraversion, sociability, emotionality, and inhibition (the I-ESEI family of traits)? 2) How do individual differences in the I-ESEI family of traits moderate the nature of characteristics of the individual's context? By bringing together outstanding international researchers who present their current research and theories, the editors systematize research contributions in the domain of contextual contributions to the I-ESIA family of traits and set the agenda for future research directions. Appropriate for use by scholars and practitioners in developmental science and family studies.

Contextual Cognition Jul 05 2020 This Brief introduces two empirically grounded models of situated mental phenomena: contextual social cognition (the collection of psychological processes underlying context-dependent social behavior) and action-language coupling (the integration of ongoing actions with movement-related verbal information). It combines behavioral, neuroscientific, and neuropsychiatric perspectives to forge a novel view of contextual influences on active, multi-domain processes. Chapters highlight the models' translational potential for the clinical field by focusing on diseases compromising social cognition (mainly illustrated by behavioral variant frontotemporal dementia) and motor skills (crucially, Parkinson's disease). A final chapter sets forth metatheoretical considerations regarding intercognition, the constant binding of processes triggered by environmental and body-internal sources, which confers a *sensus communis* to our experience. In addition, the book includes two commentaries written by external peers pondering on advantages and limits of the proposal. *Contextual Cognition* will be of interest to students, teachers, and researchers from the fields of cognitive science, neurology, psychiatry, neuroscience, psychology, behavioral science, linguistics, and philosophy.

Emotions and Affect in Human Factors and Human-Computer Interaction Oct 27 2019 *Emotions and Affect in Human Factors and Human-Computer Interaction* is a complete guide for conducting affect-related research and design projects in H/F and HCI domains. Introducing necessary concepts, methods, approaches, and applications, the book highlights how critical emotions and affect are to everyday life and interaction with cognitive artifacts. The text covers the basis of neural mechanisms of affective phenomena, as well as representative approaches to Affective Computing, Kansei Engineering, Hedonomics, and Emotional Design. The methodologies section includes affect induction techniques, measurement techniques, detection and recognition techniques, and regulation models and strategies. The application chapters discuss various H/F and HCI domains: product design, human-robot interaction, behavioral health and game design, and transportation. Engineers and designers can learn and apply psychological theories and mechanisms to account for their affect-related research and can develop their own domain-specific theory. The approach outlined in this handbook works to close the existing gap between the traditional affect research and the emerging field of affective design and affective computing. Provides a theoretical background of affective sciences Demonstrates diverse affect induction methods in actual research settings Describes sensing technologies, such as brain-computer interfaces, facial expression detection, and more Covers emotion modeling and its application to regulation processes Includes case studies and applied examples in a variety of H/F and HCI application areas Addresses emerging interdisciplinary areas including Positive Technology, Subliminal Perception, Physiological Computing, and Aesthetic Computing

Understanding the Latinx Experience Jan 23 2022 The Latino presence continues to grow in traditional population enclaves and has tripled in areas that are not traditionally associated with this pan-ethnic group. The dramatic growth of this population in the U.S. requires a considerably deeper understanding of individuals that share this multifaceted identity. This timely book synthesizes new research and its implications for practice that is critical for professionals working with Latinos in educational and counseling contexts. The authors provide insight into identity development, environmental influences, and how these factors influence persistence in higher education. By using a synthesis approach to organize multiple studies around how being Latinx influences the experiences of students in college and beyond, the authors offer a holistic view of the Latino population. Each chapter uses mixed method data points to highlight the experiences of this growing population and provide helpful insights for those who work with Latinx individuals within higher education and community settings. The new Lifespan Model of Latinx Ethnic Identity Development

constitutes a framework to consider the development and tensions experienced by Latinos as they engage with the various cultures represented within U.S. society. The studies presented in this book provide an evidence-based understanding how environmental differences may produce differing levels of development for college students and how change in environments produce reflective refinement of adult Latinx identity. Practitioners will learn about practices that help Latinx college students. Faculty and researchers will gain new understandings of the Latinx experience, and discover a starting point for further reflection and investigation.

Handbook of Psychotherapies with Children and Families Jun 23 2019 This handbook presents a comprehensive overview of the current array of intervention approaches in the child mental health field. Its coverage reflects current trends of intervention with specific problems and populations, empirical support of the approach, and the integration of treatment approaches, proceeding from global presentations of basic theoretical approaches to applications with specific problems and populations. Unique features are its focus on future directions for research and clinical practice, a structured format across diverse interventions with a focus on empirical validation, and interventions that integrate different theoretical components.

Big Gods Feb 09 2021 Examines how the belief in gods has led to cooperation and sometimes conflict between groups. The author also looks at how some cooperative societies have developed without belief in gods.

Cooperative Learning in Context May 15 2021 Explains why powerful educational innovations like "cooperative learning" do not always reach their full potential in everyday classrooms.

Modeling Contextual Effects in Longitudinal Studies Apr 25 2022 This volume reviews the challenges and alternative approaches to modeling how individuals change across time and provides methodologies and data analytic strategies for behavioral and social science researchers. This accessible guide provides concrete, clear examples of how contextual factors can be included in most research studies. Each chapter c

Context: A Framework for Its Influence on Evaluation Practice Sep 18 2021 Context is a force in evaluation. It shapes our practice, influencing how we approach and design our studies, how we carry them out, and how we report our findings. Context also moderates and mediates the outcomes of the programs and policies we evaluate. This issue focuses squarely on the role that context plays in practice and illuminates its effect on the implementation and outcomes of programs. Exploring the ways in which attending to context may improve the quality of evaluation practice, the contributions span theory, methods, and practice in an effort to move to a more comprehensive conceptualization of context that can guide our work. It: Provides an historical and theoretical view of evaluators' treatment of context Illustrates how context has influenced evaluation practice Presents a five-area framework for guiding a contextual analysis of evaluations Introduces "context assessment," which provides a means of integrating context and its implications within the important stages of evaluation. This is the 135th volume of the Jossey-Bass quarterly report series New Directions for Evaluation, an official publication of the American Evaluation Association.

Examining Pedagogical Content Knowledge Apr 13 2021 This ambitious text is the first of its kind to summarize the theory, research, and practice related to pedagogical content knowledge. The audience is provided with a functional understanding of the basic tenets of the construct as well as its applications to research on science teacher education and the development of science teacher education programs.

Children's Social Worlds in Cultural Context Dec 30 2019 This book addresses cultural variability in children's social worlds, examining the acquisition, development, and use of culturally relevant social competencies valued in diverse cultural contexts. It discusses the different aspects of preschoolers' social competencies that allow children – including adopted, immigrant, or at-risk children – to create and maintain relationships, communicate, and to get along with other people at home, in daycare or school, and other situations. Chapters explore how children's social competencies reflect the features of the social worlds in which they live and grow. In addition, chapters examine the extent that different cultural value orientations manifest in children's social functioning and describes how parents in autonomy-oriented cultures tend to value different social skills than parents with relatedness or autonomous-relatedness orientations. The book concludes with recommendations for future research directions. Topics featured in this book include: Gender development in young children. Peer interactions and relationships during the preschool years. Sibling interactions in western and non-western cultural groups. The roles of grandparents in child development. Socialization and development in refugee children. Child development within institutional care. Children's Social Worlds in Cultural Context is a valuable resource for researchers, clinicians/practitioners, and graduate students in developmental psychology, child and school psychology, social work, cultural anthropology, family studies, and education.

Psychological Effects of Catastrophic Disasters Jan 11 2021 A thorough, user-friendly guide of basic knowledge and group interventions for psychological trauma from terrorist attacks and other catastrophic disasters There is relatively little literature on the psychological trauma caused by catastrophic disasters, including terrorist attacks and the impending threats of terrorism. Psychological Effects of Catastrophic Disasters: Group Approaches to Treatment fills that gap by comprehensively discussing ways to minimize the psychological damage resulting from catastrophic disasters as well as the trauma developed from the threat of future terrorist attacks. The book provides thorough presentations of almost manualized group methods for the prevention and treatment of the acute and longer-term psychological effects for children, adolescents, and adults. Appropriate treatment immediately after a catastrophe can diminish harmful psychological effects, enhance an individual's quality of life, decrease psychosomatic illnesses and the exacerbation of chronic medical conditions, increase the effective utilization of medical facilities, and decrease medical expenses. In this book, internationally renowned authorities provide practical expert suggestions and helpful examples to illustrate the interventions and provide a quick reference for professionals facing the aftermath of prospective terrorist disasters and other catastrophic events. Psychological Effects of Catastrophic Disasters: Group Approaches to Treatment is divided into four sections. The first section provides an overview of the book; the second discusses the foundations and broad issues which potentially affect the outcome of group treatment; the third section presents group models which address the particular needs of children, adolescents, parents, emergency service personnel, and mental health practitioners; and the fourth part considers future directions of treatment. Designed to be used as a comprehensive single source for professionals working with victims of trauma caused by terrorism or catastrophic disaster, this book can be read and used in its entirety, or specific chapters detailing treatments can be chosen and used independently as needed. Extensive references allow opportunities for further research. Psychological Effects of Catastrophic Disasters: Group Approaches to Treatment presents unique first-person accounts of September 11th and examines: the neurobiological effects of a traumatic disaster the effective use of psychotropic medication the implications of living with ongoing terrorist threats a new framework for preparedness and response to disasters and trauma for children and families cultural, religious, and ethnic differences related to the prevention and treatment of psychological sequelae the diagnosis and treatment of traumatic grief retraumatization, distressing reminders, and their effects on post-traumatic adjustment the knowledge trauma

therapists need to integrate small group principles the diagnosis and group treatment of acute and long-term effects with adults and children the use of spiritual principles after a terrorist disaster or catastrophic event nine types of groups appropriate for specific populations Psychological Effects of Catastrophic Disasters: Group Approaches to Treatment is a timely, comprehensive reference for social workers, psychologists, psychiatrists, health professionals, mental health professionals, educators, and students. The royalties from this book shall be donated to organizations which provide direct services to those who continue to be affected by the events of September 11th, 2001 and Hurricane Katrina (August 29th, 2005).

Understanding People in Context Jul 17 2021 This exceptional book emphasizes uniquely designed interventions for individual counseling, group work, and community counseling that consider clients as individuals within the contexts of families, cultural groups, workplaces, and communities. Part I describes the theoretical research base and major tenets of the ecological perspective and its applications to counseling practice. In Part II, experts who have used the ecological perspective in their work discuss its usefulness in various applications, including counseling diverse clients with specific life challenges; assessment, diagnosis, and treatment planning; and in schools, substance abuse programs, faith-based communities, and counselor training programs. *Requests for digital versions from the ACA can be found on wiley.com. *To request print copies, please visit the ACA website here. *Reproduction requests for material from books published by ACA should be directed to permissions@counseling.org.

Contextual Engineering Jun 03 2020 This book shows readers a new way of thinking about the engineering design process, as well as how to expand their understanding of the role of technical designers in society, whether working with international communities or user populations from their own hometown. As readers build an understanding of Contextual Engineering, this book will challenge them to think about the applicability of the concept more broadly, not only in terms of technical design but in personal and professional interactions with others as well. At the same time, readers will learn techniques to explore their own predispositions and the biases they may not be aware they have, equipping them to interact with others more impartially. This self-reflection process also assists the designer in working with and accepting the uncertainty that is inherent in exploring context.

Scaling up Assessment for Learning in Higher Education Dec 10 2020 A critical issue in higher education is the effective implementation of assessment with the core purpose of promoting productive student learning. This edited collection provides a state-of-the-art discussion of recent, cutting-edge work into assessment for learning in higher education. It introduces a new theme of scaling up, which will be welcomed by theorists, researchers, curriculum leaders and university teachers, and showcases the work of leading figures from Australia, England, continental Europe and Hong Kong. The work illuminates four key elements: (1) Enabling assessment change; (2) Assessment for learning strategies and implementation; (3) Feedback for learning; (4) Using technology to facilitate assessment for learning. Solidly research-based and carrying important implications for enhanced practice in assessment for learning at the university level, it is a must read for academic developers, researchers, university teachers, academic leaders and all those interested in assessment matters.

Multiple Pathways of Cognitive Aging Aug 18 2021 "The empirical study of aging and cognition has progressed tremendously over the past 50-plus years. Much of the original research had its roots in the medical realm as investigators sought to characterize cognitive deficits associated with aging. For the most part, this research adhered to a biomedical model, in which aging was considered akin to a disease, and the focus was on understanding patterns of decline that were assumed to be an inevitable part of getting older (Hess & Blanchard-Fields, 1996). Indeed, aging was often studied by comparing patterns of decline to those associated with atypical populations with specific diseases or cortical lesions/insults (e.g., West, 1996). The study of aging and cognitive change made its way into mainstream experimental psychology in the 1960s and 1970s as researchers focused more on understanding normal aging through the lens of verbal learning and cognitive psychology (for reviews, see Kausler, 1982, 1991). One of the great advantages of these perspectives was the availability of sophisticated models to characterize memory and cognitive functions, and associated methods for assessing specific processes within these models. In these traditions, aging was usually studied by introducing a two-level age variable into traditional experimental designs that consisted of groups of young and older adults. The former groups typically comprised university undergraduates, whereas the latter groups usually encompassed a much wider age range of community-dwelling volunteers"--

Adolescence in Context Jun 15 2021 From award-winning author Tara L. Kuther comes *Adolescence in Context*, a topically oriented text that connects learners to the science that shapes our understanding of today's teenagers and young adults. The book is organized around three core themes: the centrality of context, the importance of research, and the applied value of developmental science. The text presents classic research, current research, and foundational theories, which Kuther frames in real-life contexts such as gender, race and ethnicity, and socioeconomic status. Students will come away with an understanding of the book's themes and material that they will immediately be able to apply to their own lives and future careers.

Contextual Influences on Life Span/Life Course Jun 27 2022 This special issue covers different aspects of life course development. The central argument of the first paper is that human development should be viewed as the product of the interpenetration of cultural and biological processes. The following article outlines how current sociology constructs life courses. The notion of developmental biocultural co-constructivism and specifically the zone within which human development can be expressed is the focus of the third paper. Next, a developmental account of civic engagement and political participation is provided. Finally, the special issue concludes with a paper marking individual differences in patterns of rhesus monkey biobehavioral development through the life span.

Theory of Mind Development in Context Aug 25 2019 *Theory of Mind Development in Context* is the first book of its kind to explore how children's environments shape their theory of mind and, in turn, their ability to interact effectively with others. Based on world-leading research, and inspired by the ground-breaking work of Candida Peterson, the original collected chapters demonstrate that children's understanding of other people is shaped by their everyday environment. Specifically, the chapters illustrate how theory of mind development varies with broad cultural context, socioeconomic status, institutional versus home rearing, family size, parental communication style, and aspects of schooling. The volume also features research showing that, by virtue of their condition, children who are deaf or who have an autism spectrum disorder function in environments that differ from those of typical children and this in turn influences their theory of mind. Although much important research has emphasized the role of nature in theory of mind development, this book highlights that children's understanding of other people is nurtured through their everyday experiences and interactions. This perspective is essential for students, researchers, and practitioners to gain a complete understanding of how this fundamental skill develops in humans. The book is invaluable for academic researchers and advanced students in developmental psychology, education, social psychology, cognitive psychology, and the social sciences, as well as practicing psychologists, counselors, and psychiatrists, particularly those who deal with disorders involving social and/or communicative deficits.

The Psychology and Management of Project Teams Dec 22 2021 Even though project-management researchers have become increasingly interested in factors that may have an impact on

project-management effectiveness, their efforts fall short of addressing the "human factor." And, unfortunately, many project-management scholars are largely unaware of the I/O psychology literature--relying, for example, on outdated models of motivation and team development. On the other side, I/O psychologists who research groups and teams often ignore the contextual influences--such as business sector, project type, placement in the organizational hierarchy, and project phase and maturity--that have a crucial impact on how a project will unfold. In this volume, a cross-disciplinary set of editors will bring together perspectives from leading I/O psychology and project-management scholars.

Educational Leadership and Administration: Concepts, Methodologies, Tools, and Applications Apr 01 2020 The delivery of quality education to students relies heavily on the actions of an institution's administrative staff. Effective leadership strategies allow for the continued progress of modern educational initiatives. *Educational Leadership and Administration: Concepts, Methodologies, Tools, and Applications* provides comprehensive research perspectives on the multi-faceted issues of leadership and administration considerations within the education sector. Emphasizing theoretical frameworks, emerging strategic initiatives, and future outlooks, this publication is an ideal reference source for educators, professionals, school administrators, researchers, and practitioners in the field of education.

Web 2.0-Based E-Learning: Applying Social Informatics for Tertiary Teaching Mar 25 2022 "This book deals with Web 2.0 and how social informatics are impacting higher education practice, pedagogical theory and innovations"--Provided by publisher.

Handbook of Adolescent Psychology, Volume 2 Feb 21 2022 The study of and interest in adolescence in the field of psychology and related fields continues to grow, necessitating an expanded revision of this seminal work. This multidisciplinary handbook, edited by the premier scholars in the field, Richard Lerner and Laurence Steinberg, and with contributions from the leading researchers, reflects the latest empirical work and growth in the field.

Human Mobility, Spatiotemporal Context, and Environmental Health: Recent Advances in Approaches and Methods Sep 06 2020 Environmental health researchers have long used concepts like the neighborhood effect to assessing people's exposure to environmental influences and the associated health impact. However, these are static notions that ignore people's daily mobility at various spatial and temporal scales (e.g., daily travel, migratory movements, and movements over the life course) and the influence of neighborhood contexts outside their residential neighborhoods. Recent studies have started to incorporate human mobility, non-residential neighborhoods, and the temporality of exposures through collecting and using data from GPS, accelerometers, mobile phones, various types of sensors, and social media. Innovative approaches and methods have been developed. This Special Issue aims to showcase studies that use new approaches, methods, and data to examine the role of human mobility and non-residential contexts on human health behaviors and outcomes. It includes 21 articles that cover a wide range of topics, including individual exposure to air pollution, exposure and access to green spaces, spatial access to healthcare services, environmental influences on physical activity, food environmental and diet behavior, exposure to noise and its impact on mental health, and broader methodological issues such as the uncertain geographic context problem (UGCoP) and the neighborhood effect averaging problem (NEAP). This collection will be a valuable reference for scholars and students interested in recent advances in the concepts and methods in environmental health and health geography.

How People Learn II Nov 20 2021 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Student Motivation Sep 30 2022 This book presents the latest developments in the major theories of student motivation as well as up-to-date research on the contextual and cultural variables that influence learning motivation in educational settings. An international roster of experts provides ample illustration of the complexities that are revealed when the study of cultural and contextual interactions is combined with motivational and cognitive variables.

Local Contextual Influences on Teaching Jul 29 2022 This volume is a collection of personal narratives and research findings by English language (ESL/EFL) teachers who found themselves, in one way or another, teaching in various contexts all over the world. The central theme throughout these narratives is how contextual factors played a role in their approach to language teaching in different ways. The contributors reflect on their practices and provide an engaging discussion about how they deal with curriculum and classroom organization issues within the local context. Readers can expect to learn and understand how ESL/EFL teachers in this volume exercise their agency in teaching in a language classroom. These teachers, through their own unique stories and research findings, reflect on how they responded to local contextual factors such as the learning culture, national and school policies, personal beliefs and attitudes towards pedagogy, the sociolinguistic context of teaching, the school culture, and the wider sociopolitical context in which learning and teaching takes place. Since the narrative approach has been placed center stage in teacher education as a method and an objective of inquiry, the contributors adopt the narrative form to reflect and discuss their instructional practice.

The Emerald Handbook of Women and Entrepreneurship in Developing Economies Mar 01 2020 The *Emerald Handbook of Women and Entrepreneurship in Developing Economies* examines women's role in entrepreneurial practices in a range of developing countries and applies unique strategic contextual frameworks to analyse, interpret and understand individual processes, themes and issues.

Monitoring Educational Equity Aug 30 2022 Disparities in educational attainment among population groups have characterized the United States throughout its history. Education is sometimes characterized as the "great equalizer," but to date, the country has not found ways to successfully address the adverse effects of socioeconomic circumstances, prejudice, and discrimination that suppress performance for some groups. To ensure that the pursuit of equity encompasses both the goals to which the nation aspires for its children and the mechanisms to attain those goals, a

revised set of equity indicators is needed. Measures of educational equity often fail to account for the impact of the circumstances in which students live on their academic engagement, academic progress, and educational attainment. Some of the contextual factors that bear on learning include food and housing insecurity, exposure to violence, unsafe neighborhoods, adverse childhood experiences, and exposure to environmental toxins. Consequently, it is difficult to identify when intervention is necessary and how it should function. A revised set of equity indicators should highlight disparities, provide a way to explore potential causes, and point toward possible improvements. Monitoring Educational Equity proposes a system of indicators of educational equity and presents recommendations for implementation. This report also serves as a framework to help policy makers better understand and combat inequity in the United States' education system. Disparities in educational opportunities reinforce, and often amplify, disparities in outcomes throughout people's lives. Thus, it is critical to ensure that all students receive comprehensive supports that level the playing field in order to improve the well-being of underrepresented individuals and the nation.
