Digital Divisions May 21 2022 In the digital age, schools are a central part of a nationwide effort to make access to technology more equitable, so that all young people, regardless of identity or background, have the opportunity to engage with the technologies that are essential to modern life. Most students, however, come to school with digital knowledge they've already acquired from the range of activities they participate in with peers online. Yet, teachers, as Matthew H. Rafalow reveals in Digital Divisions, interpret these technological skills very differently based on the race and class of their student body. While teachers praise affluent White students for being "innovative" when they bring preexisting and sometimes disruptive tech skills into their classrooms, less affluent students of color do not receive such recognition for the same behavior. Digital skills exhibited by middle class, Asian American students render them "hackers," while the creative digital skills of working-class, Latinx students are either ignored or earn them labels troublemakers. Rafalow finds in his study of three California middle schools that students of all backgrounds use digital technology with sophistication and creativity, but only the teachers in the school serving predominantly White, affluent students help translate the digital skills students develop through their digital play into educational capital. Digital Divisions provides an in-depth look at how teachers operate as gatekeepers for students' potential, reacting differently according to the race and class of their student body. As a result, Rafalow shows us that the digital divide is much more than a matter of access: it's about how schools perceive the value of digital technology and then use them day-to-day.

Kenworth Trucks of the 1950s Nov 22 2019 For Kenworth, the 1950s were some of its most exciting years. A financial windfall started out the decade, with a special truck built for ARAMCO that became a standard at oil sites around the world. In the mid 1950s Kenworth began building trucks in Canada and developed a new design with the cab beside the engine, upping the cargo capacity by 1,000 pounds and offering greatly improved visibility for the driver. In 1956 the company became a subsidiary of the Pacific Car and Foundry Company and under new ownership the 900 model, with a lighter, shorter chassis, was introduced. And, in 1957 the first tilt cab over engine was introduced with easier access to the engine and transmission for servicing. See the huge variety of Kenworths moving goods to Americans at the start of boom times.
