Concepts of Biology Jul 28 2019 *Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Living in Water Oct 30 2019 "Living in Water" is a classroom-based, scientific study of water, aquatic environments, and the plants and animals that live in water. The lessons in this curriculum integrate basic physical, biological, and earth sciences, and mathematics. The integration of language arts is also considered essential to its success. These lessons do not require a water monitoring program or access to an aquatic habitat, although it includes suggested field experiences for students. Several themes run throughout the curriculum, including control of variables in the design of valid experiments, the usefulness of models in understanding natural systems, application of knowledge in the design and testing of models, the collection and manipulation of numerical data, and identification of things using classification based on common characteristics. The curriculum is divided into six sections: (1) Living in Water: Aquatic Habitats-Freshwater, Estuarine, and Marine; (2) Things Dissolve in Water; (3) Temperature Changes and Aquatic Habitats; (4) Moving or Staying Put: Maintaining Position within Aquatic Habitats; (5) Light in Water; and (6) Wrapping It Up: Projects and Programs. Each section presents science content information as well as student activities. Lessons use various approaches and instructional strategies. (WRM)
