Preparing Leaders of Nonprofit Organizations Sep 20 2021 There are more than 1.8 million nonprofits in the United States and at least 3 times that many internationally. Workers in these nonprofits and civil society organizations increasingly look to academic programs to provide leadership and management training. This edited volume is designed to provide new and experienced faculty and program administrators with a broader conception of how the nonprofit leaders of the future are and could be educated. The chapters are written by experienced nonprofit program leaders who provide guidance on all aspects of building and more importantly maintaining a successful nonprofit program. Many of the chapters are written by former leaders of the nonprofit Academic Centers Council (NACC), a recognized international leader in nonprofit management curricular development, while others are written by successful founders and administrators of nonprofit programs both in the US and internationally. All chapters are however grounded in the experience of the authors, supplemented with research on best practices and focusing on future trends in the field. *Preparing Leaders of nonprofit Organizations* examines key issues and challenges in the field from multiple perspectives, some of which are curricular and intellectual while others are related to program administration and oversight. The text explores core concepts, distils distinctive features of new or emerging academic programs, and identifies ways program leadership might ensure those features are reflected in their programs regardless of where these are housed within a university. The book is an essential resource for faculty and administrators who work with or are seeking to develop a nonprofit education program. It is also a useful guide for graduate students seeking a career in the nonprofit academy.

Constructing Quality Nov 10 2020 How can we engage in a market relationship when the quality of the goods we want to acquire is unknown, invisible, or uncertain? For market exchange to be possible, purchasers and suppliers of goods must be able to assess the quality of a product in relation to other products. Only by recognizing qualities and perceiving quality differences can purchasers make non-random choices, and price differences between goods be justified. "Quality" is not a natural given, but the outcome of a social process in which products become seen as possessing certain traits, and occupying a specific position in relation to other products in the product space. While we normally take the quality of goods for granted, quality at a closer look is the outcome of a highly complex process of construction involving producers, consumers, and market intermediaries engaged in judgment, evaluation, categorization, and measurement. The authors in this volume investigate the processes through which the quality of goods is established. They also investigate how product qualities are contested and how they change over time. The empirical cases discussed cover a broad range of markets in which quality is especially difficult to assess. The cases include: halal food, funeral markets, wine, labor, school choice, financial products, antiques, and counterfeit goods. The book contributes to the sociology of markets. At the same time it connects to the larger issue of the constitution of social order through cognitive processes of classification.

Realigning for Change Jun 29 2022 Change management remains "top of the management pops" according to current surveys on the most pressing issues. Senior managers and executives, middle managers, and front-line staff are constantly asking the following questions: Why is change necessary? Why is corporate change an ever present phenomenon? Why is change management such an issue, and if it is a real one, how do we address it? Organisational aims (primarily internal rather than external) are often "out of synch" - mis-aligned - thus causing friction and under-performance. This could be the result of differing individual perceptions of organisational focus/competencies/capabilities, or differing organisational values/cultures, or differing, ill-defined roles for individuals. An understanding of the concept of misalignment and an action plan for dynamic realignment (change management) are what this book delivers. Realigning for Change provides an internal assessment of change management and, crucially, delivers a model for successful change intervention. Authors : David Molden and John Symes are NLP consultants, specialising in the implementation of change programmes.

Safety Management Systems in Aviation Aug 08 2020 Although aviation is among the safest modes of transportation in the world today, accidents still happen. In order to further reduce accidents and improve safety, proactive approaches must be adopted by the aviation community. The International Civil Aviation Organization (ICAO) has mandated that all of its member states implement Safety Management System (SMS) programs in their aviation industries. While some countries (Australia, Canada, members of the European Union, New Zealand) have been engaged in SMS for a few years, it's just now emerging in the United States, and is non-existent in most other countries. This timely and unique book covers the essential points of SMS. The knowledgeable authors go beyond merely defining it; they discuss the quality management underpinnings of SMS, the four pillars, risk management, reliability engineering, SMS implementation, and the scientific rigor that must be designed into proactive safety. This comprehensive work is designed as a textbook for the student of aviation safety, and is an invaluable reference tool for the SMS practitioner in any segment of

aviation. The authors introduce a hypothetical airline-oriented safety scenario at the beginning of the book and conclude it at the end, engaging the reader and adding interest to the text. To enhance the practical application of the material, the book also features numerous SMS in Practice commentaries by some of the most respected names in aviation safety.

Navigating Project Selection and Execution for Competitive Advantage

May 05 2020 For many organizations, the way in which processes and projects are selected and executed is a fundamental factor in how well they can prosper in today's marketplace. By improving efficiency, driving productivity and reducing costs, organizations can increase throughput, improve service and bring new products to market faster. The aim of this book is to show how to assess chances of project success at the idea stage in order to direct resources to promising projects and conserve resources. In doing that, it presents effective project execution processes, practices, and experiences that help to select the right projects and do them right. This is a mindset changing book from project speed and cost cutting to discipline, execution excellence, and competitive advantage. It is about effective business development using a practical approach to select the right projects and do them successfully. It describes how to evaluate and predict the likelihood of project success at the idea stage before resources are expended to develop projects. Each chapter describes how to evaluate planned project development and implementation, rate its performance, and identify gaps to be filled to achieve project execution excellence. The book is designed to guide the assessment of each project stage to uncover areas in need of improvement with focus on prediction of project success. Hence, each chapter stands on its own and assesses key elements of project stages to determine how well they are executed. The journey of project execution described is based on predicting project success at the idea stage and begins with understanding differences in large project requirements and their effects on the way they should be done. The evaluation of the idea's origin and reasons for pursuing a project is done with help from an experienced facilitator/moderator. The reason for it is that this individual is engaged to assess likelihood of success from an external, independent, critical, and objective perspective before the project begins.

Internal Assessment of Organizational Management Practices for Small to Medium Size General Contractors in Atlantic Canada Oct 02 2022

"Benchmarking and organizational assessment in the Canadian

construction industry are relatively well known concepts but are not applied as often as they should be. When applied at the organizational level, these principles can provide valuable insight into the state of management practices within an enterprise. Once key practices are assessed, results can be further analyzed and deficient areas can be reviewed for impact on organizational performance. The end objective in this process is for companies to determine which practices are most important and to focus on improving these practices moving forward. The barrier in this process is that organizations currently lack the ability to assess and in turn evaluate the results in a meaningful manner. This report demonstrates how a defined assessment tool can be used to collect data. Once collected this information can be used to evaluate management practices and can further be used to determine risk exposure given a set of project parameters. To demonstrate the suggested concepts, a sample organization is surveyed and a case study project is presented. The results demonstrate that any firm can use a defined assessment tool and apply basic risk management principles to facilitate overall organizational improvement."--Page ii.
