Fricke Dosimetry in High-energy Electron Beams Dec 26 2021 The NBS Fricke-Dosimetry Service (advertised in NBS Special Publication 250, 1986-1988 and earlier editions) is described in detail.

After a brief historical introduction and description of the service, the theoretical basis (including what quantities are measured, how, and why) and the philosophy of internal quality checks are discussed in some detail. This is followed by a description of the physical setup and of the step-by-step operating and reporting procedures. Throughout the section, there is reference to sample records of past performance, in order to facilitate continuity of operation in the case of personnel changes. The document concludes with a discussion of the uncertainties involved in the measurement quality assurance service, safety considerations, and an appendix containing samples of all form letters and of the final report mailed to the participants.

Outsourcing State and Local Government Services Aug 02 2022 Should we be doing everything ourselves, or might it be better to contract some tasks out to others? Could they do them better and

cheaper than we can? More and more state and local governments are asking these questions, and while there are many answers on the Federal level, these answers often don't apply lower down the line. O'Looney's book provides precisely the guidance that state and local managers need to decide to outsource, and then step-by-step advice on how to proceed. O'Looney takes managers through the intricacies of contract outsourcing and administration, while appreciating the importance of government. His book is not an argument for privatization, rather, it is an affirmation of government and the benefits of its many services.
