[Up to Heaven and Down to Hell](#) Jul 30 2022 A riveting portrait of a rural Pennsylvania town at the center of the fracking controversy Shale gas extraction—commonly known as fracking—is often portrayed as an energy revolution that will transform the American economy and geopolitics. But in greater Williamsport, Pennsylvania, fracking is personal. Up to Heaven and Down to Hell is a vivid and sometimes heartbreaking account of what happens when one of the most momentous decisions about the well-being of our communities and our planet—whether or not to extract shale gas and oil from the very land beneath our feet—is largely a private choice that millions of ordinary people make without the public's consent. The United States is the only country in the world where property rights commonly extend "up to heaven and down to hell," which means that landowners have the exclusive right to lease their subsurface mineral estates to petroleum companies. Colin Jerolmack spent eight months living with rural communities outside of Williamsport as they confronted the tension between property rights and the commonwealth. In this deeply intimate book, he reveals how the decision to lease brings financial rewards but can also cause irreparable harm to neighbors, to communal resources like air and water, and even to oneself. Up to Heaven and Down to Hell casts America's ideas about freedom and property rights in a troubling new light, revealing how your personal choices can undermine your neighbors' liberty, and how the exercise of individual rights can bring unintended environmental consequences for us all.

Making Sense of World History Apr 26 2022 Making Sense of World History is a comprehensive and accessible textbook that helps students understand the key themes of world history within a chronological framework stretching from ancient times to the present day.

To lend coherence to its narrative, the book employs a set of organizing devices that connect times, places, and/or themes. This narrative is supported by: Flowcharts that show how phenomena within diverse broad themes interact in generating key processes and events in world history. A discussion of the common challenges faced by different types of agent, including rulers, merchants, farmers, and parents, and a comparison of how these challenges were addressed in different times and places. An exhaustive and balanced treatment of themes such as culture, politics, and economy, with an emphasis on interaction. Explicit attention to skill acquisition in organizing information, cultural sensitivity, comparison, visual literacy, integration, interrogating primary sources, and critical thinking. A focus on historical "episodes" that are carefully related to each other. Through the use of such devices, the book shows the cumulative effect of thematic interactions through time, communicates the many ways in which societies have influenced each other through history, and allows us to compare and contrast how they have reacted to similar challenges. They also allow the reader to transcend historical controversies and can be used to stimulate class discussions and guide student assignments. With a unified authorial voice and offering a narrative from the ancient to the present, this is the go-to textbook for World History courses and students. Sustainable Materials Science - Environmental Metallurgy Mar 02 2020 The present book is the continuation of a first volume, which dwelt on fairly classical materials science and environmental issues. This second volume of «Sustainable Materials Science» explores more broadly the connection of materials with the biosphere, the anthroposphere and society. There is a shift, therefore, from a STEM approach (Science, Technology, Engineering and Mathematics) to an SSH one (Social Sciences and Humanities). This book is meant for students, researchers, engineers, social scientists and concerned citizens interested in how materials, nature and people interact. This volume concentrates on emissions to air, water and soil, on the connection with health and toxicology, climate change and the collapse of biodiversity. It shows how materials exhibit a social value, in addition to their engineering properties and economic valuation. Materials also provide ecosystems services in the realm of industrial ecology. They are definitely social constructs. They exhibit agency. Their role, in their value chains, can be described in terms of Actors Network Theory (ANT). This book is unique in its approach of overarching so many fields of knowledge. There are excellent treatises on materials science and on industrial ecology. However, the connection of materials with the social dimension of sustainability is rarely discussed elsewhere and the pluridisciplinary cocktail of approaches used here is truly new. The book positions itself in a worldview of four intersecting dimensions: materials and energy, space and time.

Spoils of War Mar 26 2022 While a large number of books have dealt with the navies and war at sea during the World Wars, the immediate aftermaths have generally received only minimal coverage. However, the fates of defeated navies are of enormous interest from a number of perspectives. These include the relative priorities of the victorious powers, acquisition and testing of ex-enemy materiel and the intended future capabilities of those ex-enemy navies that were to be allowed to continue to exist. This new book traces the histories of navies and ships of the defeated powers from the months leading up to the relevant armistices or surrenders through to the final execution of the appropriate post-war settlements. In doing so, it discusses the way in which the victorious powers reached their final demands, how these were implemented, and to what effect. The later histories of ships that saw subsequent service, either in their original navies or in those navies which acquired them, are also described. In doing this, much use is made of material drawn from archival, and in some cases archaeological, sources, some of which has never previously been used. Through these, a wide range of long-standing myths are busted, and some badly distorted modern views and assessments of events in the wake of the conflicts put right. The fascinating narrative will be accompanied by tabulated lists of all major navy-built (and certain significant ex-mercantile) enemy ships in commission at the relevant date of the armistice or surrender, or whose hulks were specifically listed for attention in post-Second World War allied agreements. These will include key dates in their careers and their ultimate fates. This highly original book, drawing on archaeological evidence as well as archival sources, and including numerous photographs will become an essential reference tool for all those interested in the naval history of the two World Wars.

Irishness and Womanhood in Nineteenth-century British Writing Feb 22 2022 Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.
