Behavioral Aspects of Pediatric Burns Nov 29 2019 In recent years, considerable professional attention has centered on the behavioral aspects of various childhood illnesses and injuries. Indeed, child health psychology has grown exponentially over the past decade. One index of this growth is found in the number of texts that have recently appeared in the area (Gross & Drabman, 1990; Karoly, 1988; Krasnegor, Arasteh, & Cataldo, 1986; Levine, Carey, Crocker, & Gross, 1982; Routh, 1988; Russo & Varni, 1982; Tuma, 1982; Varni, 1983). In general, these texts provide summaries of the psychological literature across a variety of established (e.g., oncology) and emerging (psychoneuroimmunology) areas of child health. Until recently, many books on the psychological aspects of pediatric health provided no or minimal information about the psychosocial plight of child burn victims. In some instances, pediatric burns might be mentioned parenthetically as another example of a population for which behavioral treatment procedures (e. g., pain management) may be of value. In part, the relative inattention devoted to this population may be related to the perception that the literature in this area is sketchy and characterized by significant methodological and substantive shortcomings. In many instances, this perception is largely justified. However, it is also the case that the pediatric burn literature has evolved considerably over the past decade and that the incidence of, and morbidity associated, with severe burn injuries mandates immediate and increased attention by mental health professionals.

The book explains how systemic thinking works and how Systemic Action Research can be embedded into organisational structures and processes to catalyse sustainable change and critical local interventions. Practically written, it details how to design a programme and build it directly into policy and practice development, extending the possibilities of action research beyond the 'individual' and the 'group' to work across whole organisations, multi agency governance arenas, and networks. The book is filled with illustrative stories and pictures which bring the concepts to life enabling the reader to develop a clear picture of how to put it into practice. Systemic Action Research programmes are now being adopted in Government and local governance contexts as well as in national and international NGOs. This book will be invaluable for experienced action researchers as well as social science and social policy researchers who will benefit from an approach to qualitative research which is participative, grounded in practice and allows systemic understandings of complex problems. Policy makers and practitioners will appreciate a process which generates meaningful evidence about the dynamics of change and offers a tangible system for continuously integrating that learning into both formal and informal decision-making.
