Introduction to Anatomy & Physiology Teacher Guide Nov 11 2020 Volume One, The Musculoskeletal System, opens with the building blocks of your body—the cells. Your body is built from many kinds of cells and tissues, and you will learn how they work. Even the bones and muscles that give you strength and speed depend on many types of cells. This book will: Show you the ins and outs of the bones in your skeleton and how they function Give detail as to how your marvelous muscles move you Provide a detailed glossary in the back for quick reference! Throughout the book you will learn things to do to keep your body healthy. But in a fallen, cursed world things are bound to go wrong. We will look at what happens when disease or injury affects bones and muscles. Volume Two, Cardiovascular and Respiratory Systems. From the level of the cell to the organs themselves, we will examine these systems in depth. Here you will learn: The incredible design of the human heart and how it is really “two pumps in one!” How blood moves through an incredible network of arteries and veins What “blood pressure” is and the marvelous systems that help regulate it How the respiratory system allows us to get the “bad air out “ and the “good air in” Along the way, we will see what happens when things go wrong. We will also suggest things to do to keep the heart and lungs healthy. Although the world insists that our bodies are merely the result of time and chance, as you examine the human body closely, you will see that it cannot be an accident. It can only be the product of a Master Designer.

A Guide to Anatomy & Physiology Lab Feb 12 2021

Introduction to the Anatomy and Physiology of Children Jul 28 2019 Fully updated, this new edition provides an introduction to normal, healthy physical development for all professionals who specialise in working with children. The author, an experienced nurse teacher, guides the reader through the key changes in body systems and functions from embryo to birth through childhood and adolescence. Chapter 1 sets the scene for physical needs in child development, such as the need to be warm and safe. Chapters 2 to 9 cover the body systems: skeletal; nervous; cardiovascular; respiratory; renal; digestive; reproductive; and immune. The embryology and physiological function at birth is explored in each chapter before the text moves on through the many changes over the next decade to puberty and the arrival at adult functioning. A new final chapter provides a holistic account of children's development, body and mind. Each chapter is illustrated with line drawings and tables, and ends with scenarios which illustrate how knowledge

supports good practice in a real-life situation, and a quiz to consolidate learning. Concise and clearly written, this introductory text will be essential reading for all those working with children and families in the health and social care sector, enabling them to ensure children enjoy a safe and healthy childhood in line with Every Child Matters and new national service framework directives.
