Life Support Oct 22 2021 "Insightful and thought-provoking" – Rt Hon. Matt Hancock MP, Secretary of State for Health, 2018–21 "Brilliant" – Sir Stephen Bubb, director of Charity Futures and the Oxford Institute of Charity "A tour de force" – Niall Dickson CBE, former chief executive of The King's Fund, the General Medical Council and the NHS Confederation *** How good is the NHS, really? That is the question this book seeks to answer, as the health service emerges from the gravest crisis in its history with more money – but greater challenges – than ever before. During the pandemic, voters made extraordinary sacrifices to save the NHS from collapse. Thanks to these efforts and the dedication and bravery of the NHS workforce, hospitals were able to treat patients with coronavirus, but millions of others lost out. Now an exhausted and depleted NHS workforce faces a huge backlog. The gap between supply and demand for publicly funded healthcare has never been so wide. With record numbers waiting for treatment, the politicians' answer has been to spend ever more taxpayers' money. The question is whether throwing cash at the problem will work. Every day, millions of patients receive care that is fair, good or outstanding. In keeping with Nye Bevan's founding principles, the same treatment is available to rich and poor, free at the point of need. Public support for the concept remains overwhelming. Yet for every positive NHS experience there are negatives: care that is substandard, disjointed and arrives too late. A cult of secrecy surrounds errors and failings. Politicians on all sides dissemble and lie. This book seeks to strip away the spin and uncover the true state of the NHS: the good, the bad and the ugly. It explores an increasingly urgent question: in an era of pandemics, can the NHS provide the quality of service patients deserve?

Life Support Mar 15 2021 "A beautiful, profound, and profoundly important book.... Gordon's message is simplicity itself: sick people need skilled, humane, and insightful care that keeps their interests paramount. Registered nurses have historically provided that care, but now their ability to fulfill their crucial role faces the greatest jeopardy in the history of the profession.... Life Support belongs in the august company of Silent Spring, The Other America, The Feminine Mystique, and other pivotal works with the power to shape the nation's consciousness."—Washington Post "In this enlightening, involving, in-depth book, Gordon interweaves the history and philosophy of nursing with on-the-job observations of three nurses at Boston's Beth Israel Hospital. Gordon lets the nurses speak for themselves, effectively illustrating their commitment to their profession and involving readers in real-life dramas."—Publishers Weekly "For patients, physicians, nurses, and health policy analysts, Gordon's passionate and accessible account of the impact of managed care on skilled nursing provides clear grounds for concern."—Health Affairs In this book, Suzanne Gordon describes the everyday work of three RNs in Boston—a nurse practitioner, an oncology nurse, and a clinical nurse specialist on a medical unit. At a time when nursing is often undervalued and nurses themselves in short supply, Life Support provides a vivid, engaging, and intimate portrait of health care's largest profession and the important role it plays in patients' lives. Life Support is essential reading for working nurses, nursing students, and anyone considering a career in nursing as well as for physicians and health policy makers seeking a better understanding of what nurses do and why we need them. For the Cornell edition of this landmark work, Gordon has written a new introduction that describes the current nursing crisis and its impact on bedside nurses like those she profiled in the book.

Strategies to Improve Cardiac Arrest Survival Mar 27 2022 Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. *Strategies to Improve Cardiac Arrest Survival* examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing, and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of *Strategies to Improve Cardiac Arrest Survival* provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.
