The Oil Curse May 28 2022 Countries that are rich in petroleum have less democracy, less economic stability, and more frequent civil wars than countries without oil. What explains this oil curse? And can it be fixed? In this groundbreaking analysis, Michael L. Ross looks at how developing nations are shaped by their mineral wealth--and how they can turn oil from a curse into a blessing. Ross traces the oil curse to the upheaval of the 1970s, when oil prices soared and governments across the developing world seized control of their countries' oil industries. Before nationalization, the oil-rich countries looked much like the rest of the world; today, they are 50 percent more likely to be ruled by autocrats--and twice as likely to descend into civil war--than countries without oil. The Oil Curse shows why oil wealth typically creates less economic growth than it should; why it produces jobs for men but not women; and why it creates more problems in poor states than in rich ones. It also warns that the global thirst for petroleum is causing companies to drill in increasingly poor nations, which could further spread the oil curse. This landmark book explains why good geology often leads to bad governance, and how this can be changed.

Complications and Mishaps in Anesthesia Dec 23 2021 Ability to learn from errors is an essential aspect of the quest to improve treatment quality and patient safety. This book consists of 33 cases in anesthesiology that is based on real life situations and illuminate avoidable complications and mishaps. The cases are presented in a novel manner in that they are embedded within narratives. The reader comes to each case “cold”, without any clue as to the content, and each case comprises a narrative and a factual component that are interwoven. The narrative parts provide the reader with information and tips regarding the clinical problems and tasks that the protagonist must face and try to solve. The idea is to engage the reader emotionally while reading and to entertain him or her while learning. All cases conclude with short debriefing sections which include possible strategies to prevent similar errors or mishaps.

Skills for a Modern Ukraine Jun 16 2021 Ukraine’s economic progress since its independence in the early 1990s has been uneven, in part due to the slow pace of reforms, unfavorable demographic factors, and low productivity. One of the key factors limiting success is the inadequacy of the skills of Ukraine’s workforce with the needs of a modern economy. While the country demonstrates a strong record of educational attainment and acquisition of foundational skills, the post-secondary education and training system fails to equip workers with the right advanced skills for labor market success. This study provides new evidence on the nature of skills valued in the labor market, reviews the institutional constraints hindering the development and use of workforce’s skills, and proposes a set of policy options. This study argues that, to improve skills formation and use, Ukraine needs to renew its public policies on post-secondary education, labor-market intermediation and information, and labor regulations. Drawing on household and firm surveys, the study finds that workers need a mix of advanced cognitive skills (like problem solving and communication), socio-emotional skills (like self-management and teamwork), and technical skills (like computer programming or sale skills) to be successful in the labor market and meet employers’ demand. These skills are not necessarily explicitly taught in traditional learning settings. Policy makers should therefore rethink the content of post-secondary education and training to focus on the development of skills for the labor market rather than only attendance. To do so, establishing steady links between education institutions and enterprises, by setting up occupation standards and adapting curricula to firm demand, is crucial. An essential instrument to identify the demand for skills and facilitate fruitful investments in skills formation is a labor market information system—which provides reliable information on labor market prospects across post-secondary education fields and institutions and job requirements and characteristics to students, their families, and jobseekers. Nonetheless, a better formation of skills would only be beneficial if most of the workforce can put them at use in jobs, promoted by better labor regulations.
