The 2005 DARPA Grand Challenge Jul 26 2019 The DARPA Grand Challenge was a landmark in the field of robotics: a race by autonomous vehicles through 132 miles of rough Nevada terrain. It showcased exciting and unprecedented capabilities in robotic perception, navigation, and control. The event took place in October 2005 and drew teams of competitors from academia and industry, as well as many garage hobbyists. This book presents fifteen technical papers that describe each team's driverless vehicle, race strategy, and insights. How the Japanese Learn to Work Jun 16 2021 Japan is regarded as a world leader in the field of education and training for improved economic

performance. Yet success in Japan is often achieved by going against what is regarded as ideal practice elsewhere. This book offers the most comprehensive review available in English of the many facets of Japanese vocational education and training. Covering the system from primary education through to in job-training offered by companies, this book provides a detailed study of current practice giving equal emphasis to formal training in explicitly vocational courses, and informal training in factories, shops and offices. The authors analyse the difference between substantive 'person-changing' training and mere 'ability-labelling.' They raise important questions, such as: To what extent does the need to package skills to provide convenient qualifications distort the actual training given? How efficient is it to rely on professional trainers to certify the acquisition of skills, rather than run separate testing systems? The authors reveal how, in Japanese companies, employees are strongly motivated by pride in the successful execution of their jobs, and that much company training is carried out by colleagues.

Improving Software Testing Sep 19 2021 Software is continuously increasing in complexity. Paradigmatic shifts and new development frameworks make it easier to implement software – but not to test it. Software testing remains to be a topic with many open questions with regard to both technical low-level aspects and to the organizational embedding of testing. However, a desired level of software quality cannot be achieved by either choosing a technical procedure or by optimizing testing processes. In fact, it requires a holistic approach.This Brief summarizes the current knowledge of software testing and introduces three current research approaches. The base of knowledge is presented comprehensively in scope but concise in length; thereby the volume can be used as a reference. Research is highlighted from different points of view. Firstly, progress on developing a tool for automated test case generation (TCG) based on a program's structure is introduced. Secondly, results from a project with industry partners on testing best practices are highlighted. Thirdly, embedding testing into e-assessment of programming exercises is described.

The American Board of Psychiatry and Neurology Oct 21 2021 This definitive history of the American Board of Psychiatry and Neurology (ABPN) shows how the Board, by defining core competencies in psychiatry and neurology, established national guidelines and standards for certification during an era of unparalleled technical and therapeutic advances. Understanding how the various specialties and subspecialties evolved, and how the credentialing process was conceived, developed, and adapted to reflect changes in clinical practice, is invaluable to both the candidate approaching the certification exams and the diplomate seeking to maintain certification. In addition, the book's emphasis on the future as well as the past provides a framework for thinking about the contemporary issues that confront the individual clinician and the community as a whole. The American Board of Psychiatry and Neurology: Looking Back and Moving Ahead provides persuasive testimony that those earning certification have achieved an exceptional standard of professionalism, expertise, commitment to lifelong learning, and adherence to ethical standards, as well as assurance that the ABPN will continue to provide this service to the profession -- and the public -- at the highest level.

Midwifery & Childbirth Jun 04 2020 The author, a nurse-midwife and epidemiologist, brings together the myriad strands of history, culture, science, economics, and policy that have resulted in the current condition of maternity care in the US. While acknowledging the role and importance of medical obstetrics, she argues that the most sophisticated medical treatment does not reflect an understanding of childbearing as both a physiologic process and an important human experience and transition. Trust, Privacy and Security in Digital Business Nov 29 2019 This book presents the proceedings of the 7th International Conference on Trust, P-vacy and Security in Digital Business (TrustBus 2010), held in Bilbao, Spain during August 30–31, 2010. The conference continued from previous events held in Zaragoza (2004), Copenhagen (2005), Krakow (2006), Regensburg (2007), Turin (2008) and Linz (2009). The recent advances in information and communication technologies (ICT) have raised new opportunities for the implementation of novel applications and the provision of high-quality services over global networks. The aim is to utilize this 'information society era' for improving the quality of life for all citizens, disseminating knowledge, strengthening social cohesion, generating earnings and finally ensuring that organi- tions and public bodies remain competitive in the global electronic marketplace. - fortunately, such a rapid technological evolution cannot be problem-free. Concerns are raised regarding the 'lack of trust' in electronic procedures and the extent to which 'information security' and 'user privacy' can be ensured. TrustBus 2010 brought together academic researchers and industry developers, who discussed the state of the art in technology for establishing trust, privacy and security in digital business. We thank the attendees for coming to Bilbao to participate and debate the new emerging advances in this area.

Comprehensive Functional Verification Nov 02 2022 One of the biggest challenges in chip and system design is determining whether the hardware works correctly. That is the job of functional verification engineers and they are the audience for this comprehensive text from three top industry professionals. As designs increase in complexity, so has the value of verification engineers within the hardware design team. In fact, the need for skilled

verification engineers has grown dramatically--functional verification now consumes between 40 and 70% of a project's labor, and about half its cost. Currently there are very few books on verification for engineers, and none that cover the subject as comprehensively as this text. A key strength of this book is that it describes the entire verification cycle and details each stage. The organization of the book follows the cycle, demonstrating how functional verification engages all aspects of the overall design effort and how individual cycle stages relate to the larger design process. Throughout the text, the authors leverage their 35 plus years experience in functional verification, providing examples and case studies, and focusing on the skills, methods, and tools needed to complete each verification task. Comprehensive overview of the complete verification cycle Combines industry experience with a strong emphasis on functional verification fundamentals Includes real-world case studies

Operations Management for Service Industries Jan 12 2021 Looking at service industries from the cost and quality management viewpoint, Bassett argues that to achieve effective service delivery, companies must move from high-volume, long-run output to low-volume and short-runs operations. He maintains that despite the inevitability of suboptimized plan and equipment utilization, inefficiencies are not inherent. His book outlines a vision of short-run operations based on proven principles of management and organization science, and provides service industry management with a blueprint for successful competition.
